

THE TOPLINE IS NOT THE PROBLEM.

In the illustrative August 2026 review, revenue is only modestly below plan. But

REVENUE	EBITDA	CASH	DSO
\$164.1M	\$16.7M	\$14.6M	53 days
-2.2% vs budget	-19.3% vs budget	-\$7.8M vs expected	+10 days vs target

WHAT MANAGEMENT NEEDS TO KNOW

- Why is EBITDA falling almost nine times faster than the revenue percentage miss?
- Which business units, regions, and operating drivers account for the gap?
- Why is cash deteriorating faster than earnings?
- Is the current full-year forecast still credible?
- Which actions create the greatest improvement over the next 90-180 days?

ILLUSTRATIVE DIAGNOSIS

Margin compression	Labor, subcontractor economics, pricing, and mix are suppressing EBITDA.
Working capital deterioration	DSO increased from a 43-day target to 53 days, tying up liquidity.
Resource allocation	Digital & Advisory is outperforming plan and may warrant incremental capacity.
Forecast risk	The existing outlook assumes more recovery than recent operating evidence supports.

PRIORITIZE CONTROLLABLE DRIVERS.

1. Pricing Action

Target price increases and contract surcharges where cost inflation is not fully recovered.

2. Northeast Operating Intervention

Improve technician utilization while reducing overtime and subcontractor dependency.

3. Working Capital Initiative

Focus executive collections on the largest overdue customer balances.

4. Resource Reallocation

Shift selected capacity toward higher-growth, higher-margin Digital & Advisory demand.

5. Forecast Reset

Move to a probability-weighted rolling forecast and monthly reforecast cadence.

ACTION-ADJUSTED ILLUSTRATIVE OUTLOOK

Execution-Weighted EBITDA	+\$2.1M	Expected Cash Release	+\$4.3M
Action-Adjusted Cash	\$17.4M	Action-Adjusted DSO	~43 days

WHY THIS MATTERS

The Command Center is designed to create a repeatable finance operating capability: one trusted management view, clearer causal analysis, earlier visibility into risk, and documented actions that are reforecast as execution becomes real.
